Application Modernization Assessment

Unlock the full potential of AWS

Modernize your applications in the best way possible for AWS. We understand that modernizing your applications can be a complex and time-consuming process, which is why our team of experts will work closely with you to create a customized plan that aligns with your unique business needs and goals.

This assessment will work with your team to get a detailed understanding of your existing applications, including pain points, and we will help define a modernization roadmap for your future state cloud-native application. By designing a cloud-native application, you'll be able to take advantage of the many benefits that come with cloud computing, such as scalability, security, and agility. Our application modernization assessment will help you stay ahead of the curve, attract top talent, and ensure that your business remains competitive in today's rapidly changing technology landscape.

Key Activities

01 — Modernization

Replace legacy component with highly scalable and managed AWS-native components to help your application deliver more

02 — Roadmapping

Get a detailed plan for modernizing your application from your infrastructure to data to order to reduce complexities and costs

03 — Cost Optimization

Improve your bottom-line ROI while also bringing new flexibility to your technical teams and enabling operational efficiency

aws PARTNER Premier Tier Services

Engagement Details

Highlights

➔ Assess your application
  ◆ Data Tiers
  ◆ Compute Tiers
  ◆ Build and Release Processes
➔ Identify opportunities for application modernization using AWS-native components
➔ Develop future state application architectures

Deliverables

➔ Application modernization document including current state and future state designs
➔ Application modernization roadmap outlining the path to attain future state
➔ Costing exercises helping you map your future state architecture and ROI
