

AWS Migration Acceleration

Accelerate AWS migration with Caylent's AWS expertise and frameworks

Migrations are complex and can be time-consuming, but they are essential for unlocking innovation and future business value.

The AWS Migration Acceleration Program (MAP) streamlines your path to cloud adoption. By leveraging MAP, the Caylent team will help you establish robust AWS cloud foundations, accelerate deployments, and minimize overall risk. With deep cloud-native expertise, Caylent is uniquely qualified to guide you through the optimal cloud adoption path tailored to your technology and business roadmap.

Key Activities

Assess

Conduct an AWS Migration Readiness assessment or Customer Cloud Readiness assessment to identify adoption goals and highlight capabilities required for migration

Mobilize

Build a robust AWS base with initial planning, AWS Control Tower setup, pilot app migration via ADM, and migration strategy development

Migrate

Utilize Caylent's expertise and tools to efficiently migrate and modernize your workloads, automate operations, and set up ongoing optimization

Engagement Details

Highlights

- Build AWS Control Tower & Landing Zone with secure, compliant foundations
- Migrate pilot application(s) leveraging Automation Driven Migration (ADM) & develop a subsequent migration plan
- Automation Driven Migration (ADM) uplifts your people, processes and technology seamlessly moving applications to the cloud leveraging infrastructure as code (IaC)
- GitOps based Kubernetes deployment management helps you automate infrastructure deployment and security management so that you can focus on your application code.
- Flexible delivery models to meet your specific migration goals and timeline.
