

Caylent Accelerate™ for Agent Cloud Operations

Operate, optimize, and evolve your AWS environment with confidence.

AI agents and AWS experts, working as one team to run and improve your cloud.

Incident queues fill faster than engineers can triage them. Cost recommendations accumulate unactioned. Engineers spend the majority of their day on reactive work instead of building.

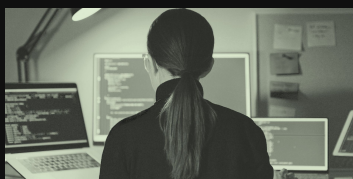

Caylent Accelerate™ pairs AI agents with AWS-certified architects, delivered as one accountable team. Our agents are trained on 12 years of proprietary CloudOps intelligence and governed through expert-defined guardrails and SLOs so every action is bounded and measurable.

Where We Can Help

Instant Incident Triage

Every ticket gets root-cause context and a recommended resolution path before a human is paged.

Engineering Hours Redirected

Guardrailed agents accelerate the majority of remediation tasks. Our AWS architects and engineers approve and audit.

Continuous Cost Optimization

Agents constantly surface savings opportunities so they become visible the moment they appear in the environment.

Capacity That Compounds

Agents carry context forward, so the system improves with each ticket it closes, and your team gets more hours back.

Our Approach

01

Onboard

Deploy platform monitoring, integrate alerting, and document your environment so operational coverage is live before project close.

02

Operate

Monitor, triage, and resolve incidents proactively, with AI agents carrying context forward from every ticket closed.

03

Optimize

Agents and engineers surface and action cost, performance, and reliability improvements continuously.

04

Evolve

Expert-led reviews align the operations roadmap to your evolving AWS goals and workload growth.

Deliverables

Managed Monitoring Platform	Caylent's managed operations platform deployed to your environment with custom runbooks, escalation procedures, and integrated alerting on day one.
Incident Response Coverage	Unlimited Tier 1 and Tier 2 support with defined SLAs, root-cause analysis, and documented resolution paths for recurring alert patterns.
Agent Onboarding and Configuration	Agents configured with expert-defined guardrails and seeded from historical ticket data before go-live.
Native Platform Integration	Agents integrate through Slack or the Caylent MSP platform so triage, escalation, and optimization signals flow into interfaces your team already uses.

Getting Started with CAYLENT Accelerate™

01 | Managed Services

CloudOps Core

CloudOps Core combines AI agents with certified AWS architects for always-on monitoring, triage, and cost optimization.

Packages are offered at a fixed monthly fee and scale with your cloud footprint.

Starting at \$7,500 USD

02 | Try It Free

30-Day Trial

Every qualified migration receives 30 days of CloudOps Core at no additional contract or set up fee.

Onboarding starts during migration delivery so monitoring is live before the project closes, and value begins on day one.

Free with Every Qualified Migration

03 | Build It

AIOps Platform

For enterprises that want to own their infrastructure, we design and build a custom AIOps platform tailored to your needs.

Our AIOps Blueprint produces a complete integration plan for you before any spend is committed.

Blueprint Starting at \$125K

Let's Get Started

Whether your workloads are live or a migration is just closing, Caylent can put agents to work immediately.

Start with CloudOps Core, activate your free 30-day post-migration trial, or scope a custom AIOps platform with a fixed-fee Blueprint engagement.
