

Agentic Product Development

Transform Your Products & Services for the AI Era with Production-Grade Agentic Platforms

Outpace your competitors with an agentic AI ecosystem that enables rapid innovation.

Organizations struggle to operationalize agents that can evolve with user needs and integrate across complex product workflows. Teams are often held back by fragmented tools, rigid pipelines, and costly experimentation cycles that slow AI adoption. Without a scalable, unified foundation, agents remain stuck in prototypes, unable to learn, adapt, or deliver measurable business outcomes across products and platforms.

We deliver tailored, production-grade agents built on Amazon Bedrock AgentCore, to power flexible, multi-model AI ecosystems within your organization.

Caylent designs and deploys enterprise-ready agentic systems using Amazon Bedrock AgentCore to enable intelligent, context-aware AI across your products and platforms. We deliver agents that integrate seamlessly into existing enterprise workflows or power entirely new capabilities—handling complex orchestration, learning over time, and supporting flexible user interaction. Whether you’re modernizing current experiences or building new ones, we help you scale AI that aligns with your business architecture and objectives.

What You Can Achieve

Faster Time to Market

Accelerate deployment of AI features that resonate with users and generate value, without drawn out prototyping cycles.

Governed AI Platform

Launch AI you can trust: governed, observable, and aligned with product, engineering, and security requirements.

New Revenue & Product Capabilities

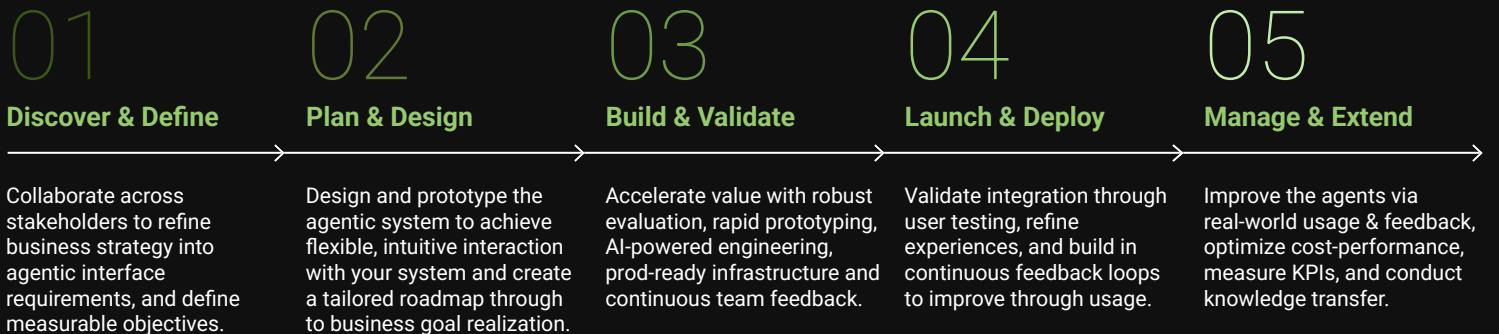

Create net-new product functionality powered by intelligent, evolving agents, not just incremental feature improvements.

AI-Native Organization Evolution

Equip internal teams with the architecture, knowledge, and confidence to own and scale AI capabilities independently.

Our Approach

Deliverables

Agentic Interface & System Design	A tailored architecture and agent-based, multi-model solution aligned to business needs, applications, and workflows.
Evaluation & Model Recommendations	Prompt and agent evaluation outputs, including recommendations for ongoing iteration, optimization, and scaling.
User Testing Results & Integration Plan	Validated testing outcomes, integration strategies, and production measurement planning to drive seamless adoption within real user environments.

Customer Stories

- Generative AI
- Agentic AI
- Agentic Systems

CloudZero

Scaling FinOps with Agentic AI Built on AgentCore

Implemented CloudZero Advisor, an agentic platform built on AgentCore Runtime that orchestrates five specialized agents, enabling secure, scalable multi-agent collaboration for complex cloud workloads.

Reduced developer cognitive load by 75% and delivered 5x faster response times across workloads

Insightly, an Unbounce Company

Redefining CRM Experience with Embedded AI

Built a conversational CRM copilot using LangGraph and Amazon Bedrock to automate tasks and streamline workflows, scaling with Insightly's 100x growth goals.

Went from PoC to production in 90 days while improving workflow automation and CRM adoption

Pipes.ai

Enhancing Customer Support and Reducing Costs with Agentic AI

Delivered a scalable, production-ready Voice AI solution with advanced conversational & agentic AI capabilities, leveraging AWS Bedrock, Deepgram, and ElevenLabs for natural customer interactions and automated workflows.

Reduced customer support scaling costs by up to 70% and lowered customer opt-out rates by 30-40%

Let's Get Started

No matter where you are on your journey, Caylent can help you quickly achieve your AI goals, from reinventing customer experiences and creating innovative new applications to massively improving productivity.

Whether you are looking to define a use case, create a roadmap, build a prototype, or implement a production ready solution, Caylent has a suite of offers tailored specifically to accelerate your goals.
