# **AWS** Control Tower

#### Accelerate cloud-native adoption with Caylent

AWS Control Tower offers a native AWS solution to efficiently manage your AWS Landing Zone, providing a secure and compliant multi-account environment that simplifies creating new accounts, consolidating billing, organizing account groups, and implementing group policies.

Caylent brings extensive experience in assisting complex technology organizations with regulatory compliance, having established numerous AWS Control Tower foundations. We collaborate with clients to either set up new AWS Control Tower configurations or facilitate the transition from legacy account structures to AWS Control Tower.

Our Catalyst service fast-tracks the deployment of a production-grade AWS foundation utilizing AWS Control Tower.

## **Key Activities**

#### Discovery

Review current usage, environments, processes, source code, development and security standards, tooling, documentation, and repositories

#### **Design Workshops**

Conduct workshops covering security, compliance, AWS fundamentals, DevOps, and CI/CD

#### **Enablement**

Deploy a customizable Catalyst, conduct an enablement session, and cover organization units, accounts, AWS SSO, and security controls

# **Engagement Details**
