

Migrate + Manage

Land on AWS the right way and stay supported once you're there.

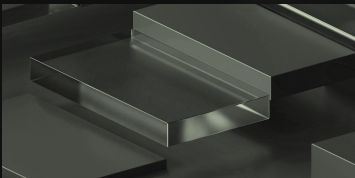

A secure, automated path to AWS, with 30 days of free managed services so you stay covered after go-live.

Most migrations close with the workloads live but the operational model incomplete. Alerts pile up, nobody's watching cost, and the team that built it has moved on.

Caylent Accelerate™, our agentic delivery system, compresses what traditionally takes 12 to 18 months into weeks, backed by our record as the 2024 and 2025 AWS Global Migration Partner of the Year. Every workload lands on a governed AWS foundation, guardrails and all, ready before the migration even closes.

What We Deliver

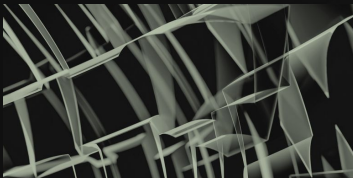

Migration Plan

Infrastructure mapping and dependency analysis define the migration path and tooling for every workload before starting.

Migration Automation

Caylent Accelerate™ orchestrates VM replication, EC2 instance creation, and network integration through AWS MGN.

Agentic Testing & Validation

Automated validation and reporting confirms every workload's functionality and integrity before cutover.

Continued Coverage After Go-Live

Every qualifying migration comes with a free 30-day CloudOps trial, with monitoring active before go-live

Our Approach

01

Discover & Define

Map infrastructure and dependencies, define the migration path, and set a realistic timeline before anything moves.

02

Plan & Design

Define the approach for every workload, retire, rehost, or replatform, and build a execution plan for each wave.

03

Build & Validate

Workloads migrate through AWS MGN with orchestrated replication, instance creation, and network integration.

04

Launch & Deploy

Launch templates generate instances into Terraform IaC through a CI/CD pipeline for repeatable deployments.

05

Manage & Extend

Automated health checks confirm every migrated workload before cutover.

Synchronized Trial Setup & Launch

Monitoring configuration and security checks begin as waves complete.

Monitoring goes live so operational coverage is active from day one.

Free coverage continues from migration close for 30 days.

What's Included in Your Trial

Caylent Managed Services Platform

Caylent's managed operations platform deployed to your environment with custom runbooks, escalation procedures, and integrated alerting.

CloudOps Pre-Launch Instrumentation

Security checks via CloudSploit by Aqua and Datadog monitoring configured during migration so operational coverage is live from go-live.

Incident Response Targets

S1/S2/S3 response targets active during trial: 15-minute S1 response, 4-hour S2 response.

Dedicated Customer Success Manager

A named CSM coordinates all CloudOps matters and serves as the customer's primary point of contact.

CloudOps SOW at Trial Activation

A fully scoped CloudOps continuation proposal delivered at trial activation, ready for the Day 30 decision.

Customer Outcomes

Post-Migration Operations

Engineering teams returning from project delivery stay focused on feature work. Agents triage 100% of incidents with root-cause context before a human is paged, starting the first day of production.

Cloud Operations

Cost Optimization at Go-Live

Savings opportunities that go unnoticed in the weeks after migration are surfaced continuously by the Cost Optimization Agent. Customers enter their first steady-state month with a prioritized list of cost actions already in hand.

FinOps

Low-Risk Path to Managed Services

Migration customers experience the product before committing. By Day 30, customers have a data-backed record of operational value rather than a vendor pitch to evaluate.

Growth Accounts

Let's Get Started

Whether your migration is in flight or just starting, Caylent can embed operational coverage before the project closes.

Ask your account team about qualifying your migration for the Migrate + Manage trial: full CloudOps access, 20 story points, and no additional contract.
