

Modern Insurance Data Platform

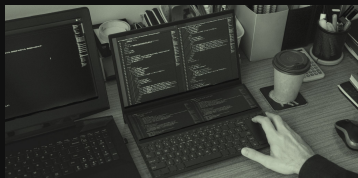

Governed data for AI that your teams can explain, audit, and defend.

AI is only as trustworthy as the data platform beneath it.

Insurance AI systems process claims, submissions, and medical records, but most platforms lack the governance to track decisions or meet deletion requirements.

Caylent builds governed data infrastructure that makes every AI application traceable, explainable, and compliant by design. Our Platform and Risk Assessment identifies where you're exposed and how to close the gaps.

Confident innovation starts with AI governance.

AI Pipeline Visibility

Track how every AI system accesses and uses insurance data.

Access Control Inheritance

Enforce data permissions at the platform layer across all AI tools.

Explainability by Design

Trace AI decisions back to source documents for audits and reviews.

Complete Deletion Capability

Automatically Identify and remove all AI-derived data tied to a policyholder record.

Our Approach

01

Discover & Define

Uncover technical requirements, legacy system dependencies, and governance gaps to shape your strategy.

02

Plan & Design

Develop a roadmap that maximizes platform benefits, aligns stakeholders, and minimizes disruption.

03

Build & Validate

Modernize your data platform on AWS, building governance, lineage, and AI-readiness capabilities into the new architecture.

04

Launch & Deploy

Deploy with monitoring, compliance verification, and structured knowledge transfer to your internal teams.

05

Manage & Extend

Provide governance continuity and long-term support as your data estate and AI capabilities evolve.

Deliverables

AI Readiness Assessment	Evaluate governance, lineage, access, and compliance gaps. Delivered as a risk-prioritized roadmap and investment case.
Governed Data Platform	Production-ready AWS architecture with lineage tracking, access inheritance, and audit-ready disposal workflows.
AI Pipeline and Attribution	RAG pipeline with source attribution from AI outputs to originating documents, validated at scale.
Operations and Compliance Package	Runbooks, monitoring, and audit-ready documentation for governance and regulatory response.

Business Outcomes

Unlock speed and de-risk operations with data you can trust

			
Accelerate AI Product Delivery	Reduce Regulatory Exposure	Expand AI Capacity	Protect Against Unfair Outcomes
Reduce delays from governance gaps, rework, and compliance reviews and bring products and features to market faster.	Enter rate filing reviews and privacy audits with clear evidence of AI decisions and data handling.	Extend AI across data sets to existing AI applications, workflows, and automations without rebuilding governance.	Monitor AI outputs for disparate impact across policyholder segments to support proactive bias and compliance testing.

Let's Get Started

Risk & Platform Assessment

Recommended First Step

By the time data risks surface, they're already costing you. Our risk assessment reviews your current platform to identify where you're exposed and exactly what to do about it.
