Supercharge Developer Productivity with AWS AI

Development Bottlenecks Cost Organizations Millions in Lost Productivity

Teams are spending up to 40% of their time on repetitive tasks. Legacy applications built on outdated frameworks require increasingly expensive maintenance, with modernization initiatives often taking months or years to complete. With studies showing that *organizations lose over $300 million annually due to developer inefficiency*, companies that delay implementing AI-assisted development face significant competitive disadvantages. The widening gap between new engineering challenges and traditional development approaches puts your organization at critical risk of falling behind.

Break Free from Development Inefficiency with AI-Powered Acceleration

With our accelerator, you can empower your engineering teams with a leading AI coding assistant in days, not months. Your developers will immediately reduce time spent on repetitive tasks, slashing issue resolution time by 30% and completing modernization work that previously took weeks in just hours. You'll see faster software delivery, higher code quality, freed engineer capacity for innovation, and a competitive advantage while maximizing the value of existing development resources.
