

## The Growing Cost of Information Overload

Organizations are drowning in fragmented knowledge spread across documents, wikis, emails, and business applications. *Employees waste up to 9.3 hours per week searching for information* across disjointed systems, resulting in significant productivity losses and decision-making delays. With data growing exponentially across distinct and separate repositories, teams often struggle to find accurate answers when they need them. Companies that fail to address this knowledge fragmentation face mounting opportunity costs, reduced innovation, and employee frustration.

## Break Through Knowledge Barriers with AI

You can empower your teams to instantly find answers, generate content, and make faster decisions. Our solution connects to your data and provides permission-aware responses to natural language questions. Employees can save hours previously spent hunting through documents, with *70% faster access to critical information*. You'll see benefits through streamlined workflows, better collaboration, and greater value from existing knowledge assets without any extensive AI expertise.

### Our Approach

-  **Discover & Define** Inventory knowledge sources and establish security permission requirements
-  **Plan & Design** Configure Q for Business and connect internal codebases for contextual assistance
-  **Educate** Deliver role-specific training sessions to maximize adoption and capability utilization
-  **Launch & Deploy** Implement targeted use cases demonstrating immediate productivity gains

### Driving Business Value

#### Where Q for Business Can Help

Knowledge Management	Connect and search across siloed information sources with natural language
Content Generation	Create drafts, summaries, and presentations from your company data
Workflow Automation	Perform actions in connected business applications from the Q interface
Custom App Development	Build lightweight AI applications for specific departmental needs without coding

#### Deliverables

Indexed Knowledge Map	Comprehensive inventory of connected data sources with permission schema
Training Materials	Enablement resources for continued adoption and expansion
Custom Q Apps	1-2 purpose-built Q applications

#### Enhancements

Enablement Support	Up to 1 month of engineering enablement with personalized guidance and rapid troubleshooting
